

What should you do AFTER your airbrush tan session?

What to Expect Immediately

- The product we use contains cosmetic bronzer which will 'rinse off' during your first shower, which will produce a tea colored run off
- Expect a shiny dark complexion until you shower
- Even though the cosmetic bronzer is washing off, your tan will still be there
- Your tan will continue to darken for 24-48 hours
- Depending on your skin type, your tan will be at its darkest 48-72 hours after your session
- You might see some bronzer 'rub off' on your clothes or sheets before your initial shower, this should wash out

Caring for Your Airbrush Tan

- DO NOT shower for 8-10 hours, do not swim or perform any physical activity that will result in sweating.
- Your first shower should be just a 'rinse off' using warm, NOT hot water
- Moisturizer daily with a paraben free moisturizer
- Your tan will last 7-10 days if you exfoliate lightly, shave infrequently and take warm, NOT hot showers
- If you take HOT showers, shave frequently or exfoliate heavily, your tan will last 5-7 day
